Why Pasteurized Shell Eggs?

The USDA, FDA and The World Health Organization recommend pasteurized shell eggs to protect against the risk of Salmonella bacteria and Avian viruses. The 2005 U.S. Food Code defines shell eggs as a Potentially Hazardous Food (PHF). Davidson's Safest Choice® Pasteurized Shell Eggs are the exception to this rule because by pasteurizing the egg we eliminate the risks normally associated with shell eggs.

U.S. Food Code

The U.S. Food Code requires food operators use pasteurized shell eggs when serving eggs to any of the millions of highly susceptible individuals or when serving an egg where the yolk and whites are not cooked firm.

- "Pasteurized EGGS or EGG PRODUCTS must be substituted for raw EGGS in the preparation of FOODS."
- "Raw EGGS served for immediate service must be cooked at 63° C (145° F) or above for 15 seconds internal temperature."
- For highly susceptible populations "...the following FOODS may not be served or offered for sale.... such as a partially cooked animal FOOD such as ...soft-cooked EGGS that are made from raw EGGS."

Incorporating Davidson's Safest Choice® Pasteurized Shell Eggs into your menu is a safe and easy solution to meet U.S. Food Code standards while providing menu variety.

What's In An Egg?

Eggs contain, in varying amounts, almost every essential vitamin and mineral needed by humans as well as several other beneficial food components. In fact, egg protein is of such high quality, it is the standard often compared to other proteins. See what you get in Davidson's Safest Choice® Pasteurized Shell Eggs!
